There's good reason Smith & Wesson is known as "the thoroughbred of the handgun industry." Our long, strong history has much to do with it.

We recognize that history alone won't enable a company to hold that position in any field. It must have vision — the ability to anticipate the changing needs of its customers — and a genuine commitment to producing the finest products in the world.

That takes resources. Major investments in technology. Scores of knowledgeable people with decades of solid experience. And a work force of creative engineers and craftsmen, approaching 2000 in number, at our modern facilities in Springfield, MA and Houlton, ME.

Here are some of the advantages an American-made Smith has to offer over lesser brands and inexpensive look-alikes. High-grade materials developed under strictly controlled conditions using the most up-to-date technology in metallurgy. Case-hardened hammers and triggers for maximum wear resistance. Gas rings in our revolvers to protect against cylinder bind. Hand fitted actions said to be the smoothest anywhere. Our double-action semiautos all feature an exclusive, independent three-safety system. And internal safety mechanisms make our revolvers the safest you'll ever find.

For a true test of the best, look to the pro's. They won't accept shortcuts and skimping on materials and workmanship. Sensible design for natural handling and easy inspection, consistent out-of-the-box accuracy, and a strong reputation for reliability with a wide variety of ammunition must be taken for granted in the pistols and revolvers they use. And the more "extra" features built right in result in less paid out for expensive modifications.

In target and duty pistols and revolvers, the pro's — by an overwhelming margin — rely on Smiths. Over 80% of all domestic law enforcement personnel (including 44 states and nearly every federal agency), and more than 335 foreign police and military departments, issue S&W's. In world-class competition like the Masters International Shooting Championship, National Police Revolver Championships and NRA Cup, most contenders use Smith & Wessons.

Take a look at our line. We offer the broadest handgun line in the world with 42 models in 132 model variations (41 variations in stainless). The Magnum® line is the most extensive anywhere. And in semiautos, our 9mm's proved superior in accuracy to any other brand and boasted a 99.96% reliability rate, as borne out by U.S. Army tests supported by in-depth government investigations.

Add to this our new models. The 422, .22 caliber semi-automatic for the economy-minded shooter and the single action 745, .45 caliber with its long list of "custom" features for action shooters.

We are committed to excellence not only in our product and new product developments but also in the performance of those who depend upon it. You'll also see this commitment in our many contributions to the Olympics, sporting organizations, and shooting fairs. And in our founding of The Masters International Shooting Championship, the first major shoot to provide professionals and amateur shooters the opportunity to compete in three handgun shooting disciplines.

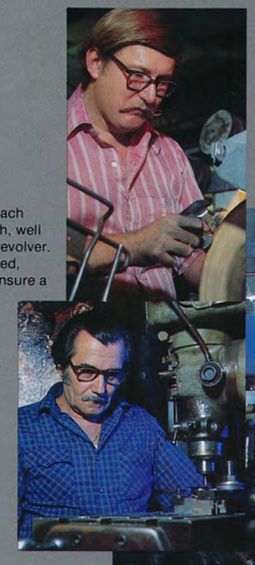
Find out why a Smith & Wesson pistol or revolver is your best buy today. Stop by your local Smith & Wesson dealer. Examine our line. Ask questions. Talk to a few professionals.

You'll decide on a Smith & Wesson. You will have the pride of owning the best.

MADE IN THE U.S.A.

Pride in Building the Best

Jack Butcher ↓
Polishing
Handgun collectors like Jack place careful attention to the finish of a handgun. Its got to be mirror-like. Each frame is individually polished by skilled craftsmen with years of on-the-job experience. Men like Jack, who collect and appreciate the beauty of firearms.



James Codding ↓
Cylinder Dept.
A sportsman like Jim knows that accuracy and detail are important in a firearm. Working with strict tolerences, each cylinder Jim produces is processed through 40 steps before completion. This insures accuracy, safe function, and its ability to digest a variety of factory produced ammo.

Leo Rajenski ↘
Frame Department
There's an art to making each forged frame into a smooth, well machined backbone of a revolver. Each frame is drilled, pinned, finely cut and finished to insure a precise fit. When Leo is not putting his art to finishing a frame, he's putting a Smith into one of his frontier oil paintings at home.

Zenon Buczek ↘
Stock Department
At home, Zenon does intricate carvings, builds fine furniture and clocks. At work, he puts the finishing touch on Smith & Wesson stocks. Each stock is carefully matched, sanded, and finished so that beauty and function become one-in-the-same on your Smith.

Susan Picone ←
Fitting
All internal parts of a Smith & Wesson are hand fitted. This results in the smoothest trigger action available. As a Massachusetts State Outdoor Woman's Champion and a finalist in the National Pistol Championships, Sue knows that this is important.

David Desroches →
Final Inspection
Every Smith & Wesson is put through its paces during final inspection. Countless checks at this stage insure that each firearm will meet the expectations of target shooters and hunters like Dave. And when Dave is not checking out a handgun at work, he's putting one to the test handgun hunting in New Hampshire.

George Grasso ↑
Test Range
George claims to be an informal shooter. His friends say different. Every week he gets plenty of practice on the test range putting thousands of rounds through Smith & Wesson handguns. Every Smith & Wesson is test fired before it leaves the plant.

Your new .22 from Smith & Wesson is here.

Smith & Wesson MODEL 422

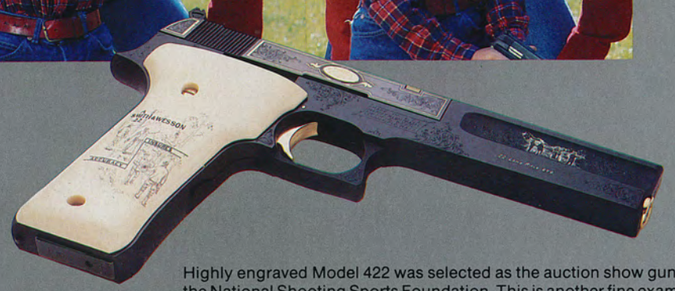
You'll be impressed with the features... and you won't believe the price.

Are you remembering the first time you fired a pistol? Or dreaming about what it would be like? What a feeling. Anticipation. Excitement. And hitting your first target... well, it's a moment you're not likely to forget.

This feeling of first-time shooting excitement brought Smith & Wesson to a decision. New shooters needed a truly fine "introductory" .22 single-action autoloading pistol to get them started right, yet one they wouldn't outgrow.

It should be a design of the eighties, with advantages for both novice and seasoned shooters. Easy to point. Easy to shoot. With features no comparable .22 semi-automatic pistol offers.

Look at what we came up with.



Highly engraved Model 422 was selected as the auction show gun for the National Shooting Sports Foundation. This is another fine example of custom engraving available through Smith & Wesson.

The Model 422, with lots of "thoughful" details — many seen in our bigger semiautos, at a fraction of their price. Features like a magazine interlock that prevents firing unless a magazine is seated, making the 422 one of the safest pistols you can buy.

What else? An adjustable rear sight*... serrated trigger and checkered, contoured stocks for a positive grip... easy-to-reach magazine release on the front strap beneath the trigger guard ...flared magazine well for quick, sure reloading... a 10-shot magazine similiar to our Model 41. And with the 422, the barrel's center line is lower in your hand than with other brands, so you feel less recoil and experience less "muzzle jump."

This lets you maintain your sight picture, fire more rapidly and achieve greater accuracy. In competition, that's the name of the game; in plinking, the game's the same.

And to give you the best possible start, Smith & Wesson gives you a full introductory package with free cleaning accessories, instruction manual, targets, Rem™ Oil synthetic lubricant** and Remington Rimfire Cartridges +.

For fun, nothing is more exciting than developing a new sporting skill like shooting.

For economy, there's no less expensive ammunition than the .22 rimfire — and no better buy than the Model 422.

And for quality, safety and long-term reliability, there's none better than a Smith.

*Target version

**"Rem" Oil: Synthetic lubricant with Teflon® base combines superior lubrication, rust prevention and moisture displacement in a single product.

+Rimfire Cartridge #1522: Remington's accurate 22 long rifle high-velocity cartridge with lubricated "golden" bullets.

Bobbed Hammer
Hammer rests flush against frame for smooth contour, eliminating snagging.

Rounded Rear Sights
Smooth, low profile shape will not snag clothing yet affords optimum sight picture with its white outline notch.

Finish
Non-glare blue on Model 469, non-glare stainless on Model 669.

Barrel
The barrel of all S&W semiautos boasts one twist in 18-¾" for prime accuracy.

Fixed Barrel Bushing
Maximizes accuracy through a tighter fit. Simplifies field stripping.

Trigger Guard
Recurved cross hatch trigger guard provides a nonslip surface for a positive two-hand hold. Enhances control during firing.

Manual Safety/Decocking Lever
Upon engagement, drops the hammer onto a solid bar of steel between the hammer and the firing pin thus preventing any unwanted firing of the weapon.

Action
All S&W 9mm semiautos have double action capability and can be fired in one smooth trigger pull.

Magazine Safety
Magazine interlock which prevents functioning of the hammer or trigger when a magazine is not inserted into the weapon.

Magazine
Beveled magazine well allows easy insertion, swift ejection and smooth reloading action.

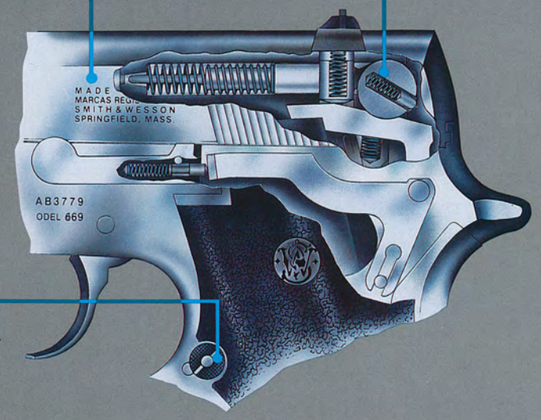
Stocks
High-impact molded Delrin grips won't crack or warp. Positive mounting system (no screws) keeps the grip securely in place. Provides a sure, all-weather grip.

Look For The Name
Over 19 million pistols and revolvers carry the Smith & Wesson name.

Backstrap
Curved, cross hatched backstrap conforms to the hand for optimum position and comfort. Aids in rapid-fire control.

Firing Pin Safety Plunger
An internal firing pin safety which locks the firing pin so that it will not function unless the trigger is fully compressed.

Magazine Finger Extension
Anatomically conforms to your hand for better grip position and hold.



Magazine Release Button
Position of magazine button allows for quick release without repositioning hand on grips. Allows very swift reloading.

Because you want the best, you often look to the pro's. Their equipment **has** to be tops.

In semiautomatic pistols, the overwhelming choice is Smith & Wesson. Departments and champion shooters who evaluate our semiautos find them unbeatable for reliability and out-of-the-box accuracy. They appreciate the added features and value built right in at no extra cost. And they're impressed with the broad selection of materials, sights, grips, hammers, triggers and finishes available in .22, .38, 9mm and .45 ACP.

Smith & Wesson SEMIAUTOS

The same advantages sought by nearly 450 domestic law enforcement and government agencies prove invaluable to amateur and serious shooters. And they've made our autoloaders among the most popular in the world.

All Smith & Wesson semiautos are based on a time-proven design for smooth functioning and easy maintenance. Yet each offers something different for a variety of sporting and personal needs. Consider the following.

Decocking Lever (Fire Position)

Decocking Lever (Safe Position)

In precision tournaments, Smith Models 41 and 52 are the choice of champions. Action shooters are turning to our double-action 645 and new single-action 745 because their standard "custom" features make the traditional .45 obsolete.

Special forces and plainclothes officers trust our DA 9mm and .45 ACP autos for their safety in handling, consistent accuracy and well-known ability to feed a variety of ammo without malfunction.

Our high-capacity, lightweight 9mm compacts offer concealability without sacrificing any of the desirable features of our full-sized autos.

And novice shooters will find typical S&W quality, unprecedented safety **and** all-important economy in our newest Model, the 422.

Hunters, too, are beginning to appreciate S&W autos as backup guns, with their sleek lines, easy carry, and the broad range of calibers available in a variety of configurations and finishes.

Examine our eleven distinctive models. You'll find one that fits.

Exclusive Safety System, Unmatched By Any Other Make

With the three-safety system incorporated into all our DA semiautos, you get:

- An ambidextrous manual safety/decocking lever which drops the hammer onto a solid bar of steel between the hammer and firing pin, preventing firing;
- An automatic internal firing pin safety which locks the firing pin, preventing firing unless the trigger is fully compressed;
- An automatic magazine interlock which prevents firing when no magazine is seated.

Yet with our tapered magazine well, these models are ready for action with split-second reloading.

Fixed Barrel Bushing

Semiautomatic Sporting & Target Pistols

MODEL 422
.22 Single Action Semiautomatic Pistol

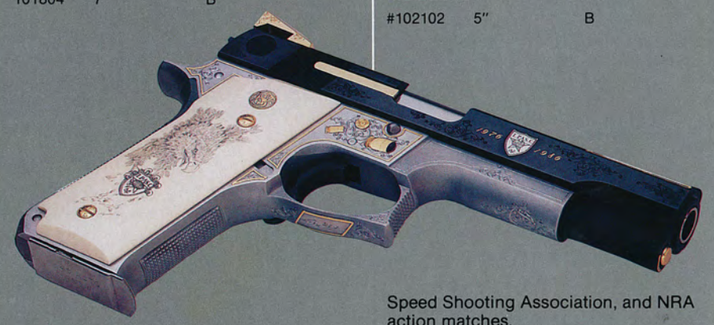
The king of accuracy — our premier target model with famous threaded barrel bushing and ball-end barrel

MODEL 52		Finish
#102102	5"	B



Smith & Wesson is proud to mark the 10th anniversary of the International Practical Shooting Confederation with the first SA .45 ever developed with the practical shooter in mind. Each Model 745 boasts the IPSC logo and anniversary dates. It offers otherwise expensive options as standard features and is ideal for IPSC, bowling pin, World Speed Shooting Association, and NRA action matches.

The first model (DVC0000), highly embellished with IPSC representations in 22K gold and Scrimshawed grips, is being raffled with a working 745 and ivory-handled accessories in a Huey presentation case. Proceeds will benefit IPSC chapters worldwide.

The 745 — the better .45. This one you won't have to modify.

*Includes empty magazine

MODEL 745
.45 ACP Single Action Semiautomatic Pistol

Caliber: .45 ACP

The better single-action .45 — truly competitive right out of the box

MODEL 745		Finish	Features
#103715	5"	B	FS

Novice or pro, there's a Smith & Wesson target pistol just right for you.

Beginners can start with our new .22 caliber Model 422, an exceptional value in a SA semiauto. (See feature on page 4.)

More experienced target enthusiasts will appreciate the comfortable grip and natural pointability of the .22 caliber Model 41. Or the outstanding accuracy of our .38 Special Model 52. Both have proven superior in competition, offering a crisp trigger pull, excellent sight picture — and no need for accurizing.

And for the action shooter expecting to invest heavily in modifying a basic .45 just to bring it up to par, there's the SA stainless Model 745 in .45 ACP. It comes with endless features previously available only through a gunsmith.

Whatever your sport — plinking or competitive shooting — rely on the name most associated with world-class shooting.

You'll be relying on a winner.

Safest .45 ACP you can buy - first American DA .45 - stainless construction - special features for action shooting

MODEL 645

Stainless		Finish	Features
#103712	5″	S	8SH-FS-AMSF

Smith & Wesson 9mm and .45 ACP semiautos are quickly surpassing others on the market.

You can attribute this to the well-known "feel" of a Smith. And the well-thought-out design that doesn't require an engineering degree to field strip.

It's the attention given to important details that makes the difference. Smith semiautos feature a convenient ambidextrous decocking lever, three independent safeties, high-capacity magazines, fixed or adjustable rear sights, and lightweight alloy or durable stainless frames.

As for selection, we manufacture four different full-size 9mm's. And two "minis" that offer the features, safety, and firepower of our larger autos, with maximum concealability.

For safe carry in a larger bore, the DA Model 645 is for you. Known for incredible performance with a "mixed bag" of ammo, noticeably low recoil and standard "custom" features, the 645 has established itself on duty and in competition as **the** .45 of the future . . . today.

Only Smith & Wesson offers you this kind of selection in semiautos. The choice is yours.

Smith & Wesson REVOLVERS

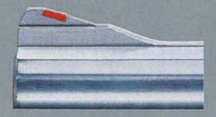
Smith & Wesson boasts the broadest revolver line in the world. The availability of four frame sizes and 111 model variations is unsurpassed. Each has been designed to meet your specific requirements.

Our smallest frame, the "J"-frame, is most popular for its compact size and weight. It gives you a wide choice in .22LR, .22MRF, .32 and .38 calibers, making it suitable for plinking, small-game hunting and personal use.

The mid-size "K" frame dates back to 1899, when the Model 10 .38 S&W Special was introduced. It quickly became a favorite of lawmen — and still is. Available in .22LR, .22MRF, .38 Special and .38/.357 calibers, the "K" line gives you the broadest selection of mid-size revolvers anywhere — nearly 50 configurations in nine different models.

When increased use in magnum ammunition demanded an even stronger workhorse than the "K", we responded with our sturdy "L"-frame .357 magnums. Still of mid size, this frame withstands the beating of constant .357 loads.

Adjustable Front Sight



Red Ramp Front Sight

For big-game and metallic silhouette enthusiasts, there's our "N"-frame line of .357, .41 and .44 magnum, .44 Special and .45 Colt calibers. Among these are the very first "Magnum" ever introduced, our Model 27 — the handgun that launched the magnum era — and the ever-popular Model 29, the legendary magnum immortalized in Hollywood.

This is only the beginning of Smith & Wesson's innovation. We continue to respond to your needs through constant updating of the selection of special features you want in a revolver. Features like our fully adjustable, four-position front sight (Models 29, 586 and 686) for total sporting versatility. It allows you to match the power of magnum loads with the speed of rapid front sight adjustment.

White Outline Rear Sight

Plain Rear Sight

So what makes a Smith & Wesson revolver an exceptional value? It's our time-tested design backed by in-the-field performance. Our use of premium materials—select carbon or aircraft-quality stainless steel. Removable side-plates for ease of service. The availability of four frame sizes. Barrel lengths that range from 2" to 10⅝". And a selection of hammers, triggers, sights and stocks that come standard — making our out-of-the-box revolver as close to custom as you can get. No other brand can match it.

Service Hammer

Combat Trigger

Target Trigger

With so much to choose from, you'll have no trouble finding the exact combination you're looking for. That's why Smith & Wesson continues to outsell any other name in handguns.

For small hands and small places, in weather-resistant stainless

MODEL 63 Stainless		Finish	Features
#102402	4″	S	SB-RR

Our introduction of the Model 34 Kit Gun in 1936 brought to sportsmen one of the handiest revolvers ever. Perfect for small hands and tight places, this compact six-shot proved itself an excellent companion. Its success led to a stainless steel version, the Model 63.

The Kit Gun is lightweight, yet provides excellent in-the-field performance and maximum durability in a small package. The short barrel length, ideal for tackle boxes and backpacks, also allows a snug fit for maximum comfort and ease of movement. In carbon steel or rugged, easy-care stainless, the Kit Gun's unbeatable for the out-of-doors.

MODEL 31

		Finish	Features
#101302	2″	B	SB
101304	3″	B	SB

For total versatility in a stainless six-shot .22, think about the "J"-frame Model 650 or 651 Kit Guns.

Chambered for the high-velocity .22MRF, both adapt to an optional .22LR auxiliary cylinder (sold separately) for economy in practice sessions. The Model 650 3″ HB is popular for personal use; the 4″ 651 is a favorite for mid-size game and on the trail.

The most respected .22 target revolver in the world since 1931 is our "K"-frame Model 17 .22LR. Its medium size and superb accuracy in bullseye and silhouette matches make this a fine gun for small game.

Small calibers. Big choice.

Naturally.

Yes, you can have a bigger caliber in a choice of compact, small-frame revolvers. And you can have them in stainless or lightweight alloy-and-steel — all of premium quality.

Pick from a choice of 2″ or 3″ barrel lengths, exposed or shrouded hammers, square or round service stocks, blue or stainless finishes. How much choice? Exactly 15 variations.

The five-shot Chiefs Special and Bodyguard series fit smoothly into pocket or purse with little bulk or bulge. This has resulted in their extraordinary appeal among detectives, plainclothes police and investigative bureaus. Hunters, too, find these compact .38's to be excellent trail guns.

With almost 100 years of time-tested performance in the world's most preferred caliber, a Smith is your smartest choice.

*Also Model 15

For an excellent all-around revolver, you can't do better than a Smith .38. With 19 styles to choose from, you're offered the widest selection of features in medium-frame revolvers anywhere.

Virtually every police and military agency in the U.S. has at some time issued the renowned Model 10 as a duty sidearm. Over 87 years in service and still ever-popular today. Its stainless steel counterpart, the Model 64, shows this same popularity in many homes.

In competition, the Model 15 has probably won more world matches than any other handgun. The majority of Practical Police Combat Masters rely on the smooth, dependable action of this model and the stainless Model 67 for the special needs of PPC shooting.

In sporting competition or at home, don't trust anything less than a Smith.

You're looking at the revolvers most frequently chosen by the F.B.I., Secret Service and other federal, state, nuclear and private security agencies. What else needs to be said?

The beauty of these models is their ability to handle both .38 Special and .357 magnum ammunition, according to need. Its comfortable weight, size and excellent balance provided by a shrouded rod make the Model 19 (66 stainless) excellent for target shooting, hunting or as a backup for traditional long-gun hunters. For backpacking or personal use, the Model 13 (65 stainless) with fixed sights is a favorite choice.

Review the many features available with these outstanding models. You'll see why they're the choice of the professionals.

8⅜″ barrel, 49 oz (1389g)

"The Magnum Line™." Smith & Wesson helped develop the first magnum calibers, then invented the revolvers to handle them. We began with our "N"-frame Model 27, still the most durable of all magnums and a legend by which all others are judged.

And when changes in magnum ammunition called for changes in medium-frame revolvers, we met the challenge with our "L"-frames. A reinforced cylinder, barrel throat and top strap takes the steady heat of magnum loads, while the full-length steel shroud greatly reduces recoil.

In "Continuous Test" programs by federal agencies, the L-frame has exceeded 10,000 round endurance.

With our introduction of an adjustable, four-position front sight on our Model 586 (686 stainless), these versatile revolvers have become the most popular .357 magnums in the industry. And our Model 581 (681 stainless) gives you all the advantages of an affordable, lightweight .357 for PPC and action styles of shooting.

Whether you want a magnum for hunting or competition, only Smith & Wesson can live up to your expectations.

Insist on the original.

World's first, most durable Magnum®

100908	6″	N	TS-TT-TH-RR-WO
100909	8⅜″	N	TS-TT-TH-RR-WO

Ask the serious handgun hunter about handguns…and he'll most likely tell you about his Smith .44 Magnum®.

The Model 29 with an adjustable front sight option, and the bestselling stainless 629, are chambered for both the .44 Special and .44 Magnum in eight different model configurations.

Longer in production than any other .44 magnum, the 29 is unquestionably the favorite of handgun hunters, long-range silhouette shooters and bowling pin afficionados.

When you're looking for high performance with less muzzle blast and recoil, our Model 57 .41 Magnum and its three new stainless versions (Model 657) make excellent choices. But if a big bore in a more easily controlled caliber interests you, the stainless Model 624 in .44 Special fits the bill.

And when your caliber simply has to be steeped in tradition, consider the historic .45 Colt developed in 1873. Our Model 25 brings back the feel of days past.

Big calibers, big legends. You can make them your own.

Features
TS - Target Stocks
TT - Target Trigger
CT - Combat Trigger
TH - Target Hammer

Custom Engraving

Custom engraving is available for any Smith & Wesson handgun. Beginning with your personal guidelines, our skilled engravers will provide research, sketches and quotes on having your pistol or revolver hand engraved to meet your requirements and budget. Personalized engraving can range from delicate scrollwork, Scrimshaw grips, emblems and scenes with gold, silver or platinum inlays to less expensive badges, logos, monograms, or lettering.

To obtain a quotation on your personalized style of engraving, contact your local dealer or Smith & Wesson for details.

"First Issue" Program

Smith & Wesson's "First Issue" program commemorates the introduction of any new entry to our product line. As one of the first models produced, each features the "1st Issue" logo, a low serial number, exceptional hand engraving and a customized presentation case, making these models an exceptional value for collectors.

1986 First Annual MASTERS International Shooting Championship

A New Standard in Handgun Competition

Some called it an impossible dream. We didn't think so. And the world's richest, most ambitious handgun tournament became a record-breaking reality.

It was a tricky quest. We envisioned a well-organized, truly "world-class" event in comfortable surroundings, with total community and industry support. Our plan was to design an unheard-of course of fire that would challenge the world's most proficient handgunners, while encouraging amateurs of all skill levels to participate. And we believed that, with the right blend of ingredients, we could increase spectator appeal, introduce families to the fun of target shooting and promote the safe handling of sporting arms.

From all accounts, we succeeded beyond our wildest imaginations.

On August 6, 1986, crowds began to fill the picturesque valley selected for this event. In three days of intense, exciting competition before a record 3,500 attendees, 116 of the world's sharpest professional and amateur handgunners competed for the title of "The Master" and their share of the largest cash purse in the history of handgun competition.

Thanks to the generosity of additional sponsors representing the best names in the industry, over $87,000 in cash was awarded to an unprecedented 151 places within professional and "sportsman" (amateur) classes for aggregate and individual event standings, special recognition categories and fun shoot-offs. Additional merchandise awards brought the total to well over $100,000 — with next year's goal $200,000 in cash prizes alone.

There was a string of "firsts" in what has been termed the most memorable of all handgun shoots. First official "pro-am" handgun competition. First to combine precision, action and long-range shooting in a unique course of fire, using all reactive steel targets. First to offer monetary awards to young people. And first to be honored with official support on city, county and state levels — from proclamations, resolutions and a "Masters International Week" right up to friendly shoot-offs among city mayors and James Thompson, Governor of Illinois, versus the President of Smith & Wesson.

Suspense ran high at the Masters. Even top pro's agreed this match lived up to its promise that no one could predict the winner. All entrants were required to perform in each of the three disciplines, with the shooter scoring highest among both pro's and sportsmen declared the world's greatest overall handgunner.

Winner of the coveted title "The Master" was Wayne Bowker, a pro from Long Beach, California. In addition to the grand prize of $7,500, a $1,200 Rolex Oyster Perpetual wristwatch as a personal trophy, and other valuable merchandise, Bowker walked away with $2,200 in the three individual events — for a whopping total of $9,700 in cash.

Others, both pro's and sportsmen, did exceptionally well. Combined winnings for several shooters added up to tidy sums in the thousands. (Yet entry fees were a mere $200 for professionals, $100 for sportsmen and $50 for juniors.) Pro's accustomed to prize schedules paying heavily to top winners (with little left for the "also-ran's") found cash distributed generously throughout the ranks. Amateurs who might never have entered a world-class competition found the experience, and the winnings, very much to their liking.

How does $4,075 in total cash prizes sound to you? That's the combined sum netted by a seasoned sportsman from South Carolina. Or the $7,000 total paid to a professional from California. A housewife from South Chicago Heights, Illinois, took home a hefty $3,500 all together. Juniors vied for $9,000 (spread among the top three positions) in U.S. Savings Bonds. With so many prize categories, the possibilities in combined winnings were virtually endless.

Jaw-clenching competition wasn't all that the Masters offered. Besides a beautiful setting, highly organized staff and immaculate range facilities, the spectators and shooters found home-grown hospitality and an instant feeling of family. And for the uninitiated, hands-on demonstrations and an instructional course gave more than 400 men, women and youngsters a safe taste of target shooting.

According to the latest available statistics, an estimated 200,000 handgunners seriously compete each year in organized tournaments, with figures more than doubling over the last five years. We decided these adventuresome men, women and young people deserved the ultimate challenge in handgun competition.

The Masters International Shooting Championship. We're proud to say it's one of the most aggressive, and successful, examples of Smith & Wesson's dedication to the shooting sports.
